

E-Commerce Sales Analysis

Report

Prepared by: Abdullah Loonat

Tools Used: Excel, Pivot Tables, Looker Studio

The purpose of this project was to analyze e-commerce sales data to identify trends in sales performance, profitability, product demand, and regional performance. The dataset was cleaned and prepared using Excel, analyzed using pivot tables, and visualized through an interactive Looker Studio dashboard.

KPI'S

<u>KEY PERFORMANCES</u>	
TOTAL SALES	R10.67M
TOTAL PROFIT	R1.84M
QUANTITY SOLD	17.3K
GROSS PROFIT	17.29%

Key Findings

- Electronics generated the highest overall sales revenue.
- The West region recorded the strongest sales performance.
- Sales and profit increased steadily between 2022 and 2024.
- Some high-volume products generated lower gross profit margins.
- Product performance varied significantly across categories and regions.

Business Recommendations

- Increase focus on high-performing product categories such as Electronics.
- Improve marketing strategies in lower-performing regions.
- Monitor low-margin products to improve profitability.
- Use sales trends to optimize inventory planning and forecasting.
- Continue tracking KPIs through interactive dashboards for ongoing decision-making.

The dataset was cleaned and transformed using Excel. Pivot tables were created to analyze sales, profitability and regional performance trends. Looker Studio was used to build an interactive dashboard for data visualization and reporting.

Skills Demonstrated

- Data Cleaning
- Pivot Table Analysis
- KPI Development
- Data Visualization
- Dashboard Design
- Business Reporting
- Trend Analysis

Conclusion

This analysis successfully identified key sales and profitability trends within the e-commerce dataset. The dashboard and supporting analysis provide valuable business insights that can support strategic decision-making and operational improvements.
